## Managed File Transfer - Simplified

DataMotion Managed File Transfer enables secure file exchange through a unique, centralized approach. Simply define your file transfer objectives, and the solution will orchestrate and report on all your transfer activity. A unified approach allows servers, mainframes, employees, partners and customers to easily exchange sensitive data. It's streamlined, secure and smart. And it saves you money.

Efficient Business Processes Without the Headache

Most MFT solutions use a file system approach, and require folder permissions and custom scripts for each workflow. DataMotion Managed File Transfer uses a simpler, results-oriented approach to easily describe and manage your transfers without the need for scripts, file directories or access control lists.

It's easy to map closely to your company's actual business processes and workflows, whether user-to-user, system-to-system, or any combination in-between. A range of connectors are provided, allowing users and systems to participate in ways that are most natural to them. The solution overlays your existing infrastructure, enhancing its capability, saving you time and adding to the bottom line.

- Recognize immediate cost reduction, improve your bottom line, and increase your business's competitive advantage
- Simplify workflow and increase efficiency
- Reduce your exposure to compliance violations, litigation and penalties
- Easily manage, control, secure and report all data exchanges
- Meet SLA requirements

Your Partners & Customers   Your Systems & Employees

Secure and in Control

Secure data exchange is a legal requirement to comply with industry regulations like HIPAA, HITECH, and PCI. DataMotion Managed FileTransfer gives you assurance that sensitive information is being encrypted. Central tracking and reporting provides visibility into all exchanges – making it simple to prove Service Level Agreements and demonstrate compliance. Now, all transfers between systems and people – internal and external – can be managed and controlled.

Beyond Managed File Transfer

Secure file exchange is just one component of the broader DataMotion platform. Using a centralized approach, the platform facilitates and coordinates data exchanges via email, file transfers, electronic forms, and automated processes. It provides a consistent experience for all exchanges, reducing complexity and increasing efficiency.

FEATURES

- Offered as hybrid public or private cloud
- Cobranded web portal
- File directory monitoring & email job triggering
- Integrated conversion engine
- Integrated encryption – no separate key management
- Configurable file expiration
- Centralized, remote administration
- End-to-end tracking and reporting
- Fully compatible with archiving systems
- Active Directory SSO
- APIs for integration with applications, portals and systems
- Supports multi-GB files
- Ad hoc transfers requires no special end-user software
- Integrates with DataMotion SecureMail

BENEFITS

- Up and running within a day
- Data transfer design maps to your actual business processes
- Supports transfers between people and machines
- Enables ad hoc and scheduled transfers in one solution
- No scripting or custom development required
- Overlays your existing systems - no rip and replace
- Leverages tools your partners and end users already have in place
- Supports existing job schedules

Additional Technical Specifications

- \+ Standard-based encryption: AES, SSL, SSH
- \+ Transport protocols: SFTP, FTPS, FTP, HTTPS, SMTP, POP3 TLS, SSL
- \+ Windows, OSX, Linux, Unix & z/OS support
- \+ Extensive browser and email client support
- \+ Smartphone and tablet support
- \+ SSAE 16, SAS 70 Type II Certified Data Center

"With the volatility of the economy, companies are looking to efficiently share, secure, audit and manage the movement of information from point to point. Having a platform that automates some of these governance processes without the expense of additional hardware or expensive integration middleware – means companies can be more transparent and confident that they are compliant with industry, regional and legal regulations and mandates."

– Frank Kenney,
   Research Director, Gartner
