

Ringtail Analytics

The Fastest Way to Accurate Decisions

Boasting a powerful way to visualize trends and identify important documents, Ringtail Analytics helps legal teams test and sample keywords, “zoom” into document sets, and review documents accurately and cost-effectively.

Cubes

Cubes—Early Case Assessment, Culling, and Reporting

Cubes bring immediate focus and priority to collection, processing and review activities via multi-dimensional reporting. With Cubes, you can quickly:

- **Know What You Have:** Test and sample keywords including, complex search combinations, and discover how documents are distributed based on custodians, date ranges, keywords and other critical factors.
- **Know Where You Are:** Monitor your review across a variety of metrics. Real-time reporting gives project managers and case leads the latest information on review speed, coding trends, privilege volumes, assignment status and a wealth of statistics on both individual reviewers and teams.

Mines

Mines—Large Scale Visualization and Smart Assignment Creation

Mines allow project leads to assess document sets of up to 1 million at a time, simply by organizing them based on key concepts and concept frequency. Mines enable your team to group conceptually similar documents for review, and removes irrelevant items from a review workflow. Using Mines, you can quickly:

- **Know Where to Start:** When faced with large, unknown data sets, Mines quickly delivers information-rich visualizations, which allow project managers to look beyond the documents and see into the conceptual heart of the matter.
- **Know What To Review First:** Quickly build assignments based on specific themes, then prioritize them all via Ringtail Review Workflow, which ensures that the most important documents are reviewed first.

Document Mapper

Document Mapper—Rapid, Visual Document Review

Document Mapper[™] provides legal teams with a powerful visual review interface which increases both the quality and speed of coding decisions, while also reducing the costs associated with document review. Using concept clustering and actionable visualizations, Document Mapper provides a multi-dimensional view of documents and allows reviewers to:

- **See What Matters:** Explore documents based on conceptual similarity, timelines, or email communication patterns. Document Mapper’s patented interface helps the reviewer discover important documents that are often missed by traditional keyword search strategies. These visual review capabilities help the reviewer efficiently navigate a large set of documents, without relying solely on the trial and error of keyword search.
- **Dramatically Increase Review Speed:** When using Document Mapper, reviewers spend less time searching and more time understanding. The ability to review in context helps reviewers to be more efficient, and often improves the accuracy of coding decisions. Reviewers can also quickly remove irrelevant documents from assignments and focus on the critical documents, finishing assignments with alacrity.

Solutions for any Type of Review

The Ringtail Analytics module brings productivity and accuracy to a wide variety of investigations and review tasks. Built on years of experience within FTI and its wide spectrum of clients, Ringtail Analytics can power your organization in many new and exciting ways.

Your team needs to perform...	Ringtail Analytics can...
Early Case Assessment	Validate the accuracy of keywords, identify key custodians, and isolate timelines of critical activity associated with matters of any size.
HR Investigation	Rapidly understand facts, relevant data and employees involved in an investigation. Analyze social network relationships and quickly focus on periods of critical activity with Document Mapper
Second Request	Efficiently and accurately turn around regulatory requests; utilize defensible tactics, ensure privilege, and manage massive data volumes against tight deadlines.
Meet and Confer Keyword Term Analysis	Quickly review, sort and filter all terms against dates and custodians; analyze relationships between coding decisions and keywords.
Intelligent Culling	Quickly and dramatically reduce collection and review volumes with confidence.
Custodial Data Analysis	Compare custodians across date ranges to confirm preservation requirements quickly.
High Speed Review	Power through any size document set using Mines; prioritize critical or "hot" documents with Document Mapper to code similar documents simultaneously.
Needle in the Haystack Review	Use key documents to "seed" clusters – find other relevant documents quickly.
High Speed 100% Visual QC	Discover and review inconsistent coding decisions quickly with Document Mapper.
